

# OPTIMISING PRODUCTION EARNINGS AT MINIMAL RISK

Are you tired of constantly staying up-to-date on market developments? And would you like to ensure a fixed price for your production with a guarantee of market price or better? Index gives you just that - at no extra cost.

Why choose Index with profit sharing?

**Minimal risk**  
> We carry the price risk and you benefit from active portfolio management.

**Increase your income**  
> We share the profit 50/50 with you so you can possibly increase your income.

**At market price or better**  
> We guarantee market price or better which makes it easier to budget.

**Monthly reporting**  
> You get an individual monthly report with overview of current price.

## YOUR CHALLENGE

Selling your electricity production in the spot market means that your risk can be rather high as the prices vary greatly over time. Financial contracts can secure you a fixed price, however, you constantly have to monitor the market and stay up-to-date to know when to enter a contract. Aiming for a high price is often tied to a great risk.

With Index, we guarantee an average of the market price with the possibility of extra earnings which means you can increase your production earnings.

## OUR SOLUTION

We guarantee a price for the delivery period at the same level as the closing prices in the forward market.

With tight risk management of your energy production and active portfolio management, we aim to hedge your production at a higher price than closing prices.

We split the profit 50/50 with you in case of surplus between closing prices and our hedged price.

**This optimises your production earnings at minimal risk.**

At Energi Danmark Securities, our skilled portfolio managers spread your risk as much as possible through active portfolio management. You get a fixed price throughout the delivery period with the possibility of extra earnings.
