

# MAXIMISING CUSTOMER VALUE WHILE MANAGING RISKS

The average market price is your maximum price. If our portfolio managers beat the market, we share the profit with you to minimise your energy costs. You don't have to worry about the timing. That's maximising value while managing risks.

Why choose Index?

**Low risk**  
 > We take the risk and share the profit 50/50 with you.

**Market price or better**  
 > We hedge your consumption before delivery - always at market price or better.

**Minimize expenses**  
 > We share any profit so you can minimise your costs.

**Strong track record**  
 > We beat the market price by an average of 111% from 2018-2022.

## YOUR CHALLENGE

Your electricity expenses can vary greatly from year to year and budgeting with energy costs can be difficult. Aiming for a low price is often tied to a great risk.

With Index, we guarantee the market price as your maximum price and profit sharing if we perform better. This means minimal risk for you and the opportunity to lower your energy costs.
