

NEW RENEWABLE ENERGY MEANS LOWER ENERGY COSTS

With a PPA agreement, your company actively adds new renewable energy to the community and you fix your electricity consumption in 10 to 15 years at an attractive, fixed price. That's sustainability without additional costs.

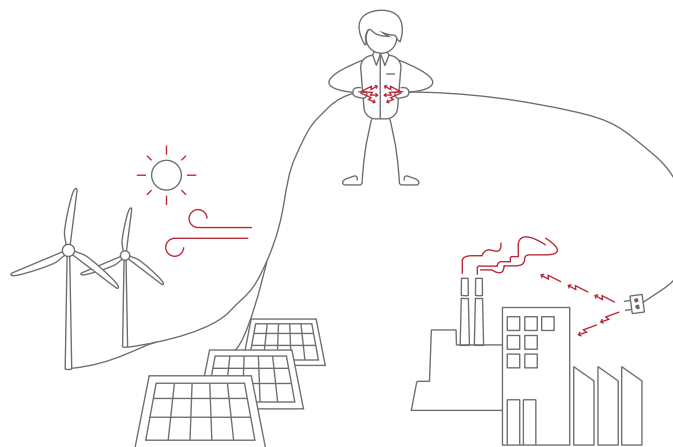

Buying green electricity has so far been a matter of reserving some of the renewable energy that is there already.

Energi Danmark now offers a PPA agreement where your renewable energy originates from completely newly built plants which are built solely on the basis of this agreement.

In addition to contributing to carbon neutrality and helping you reach your sustainability goals, the agreement can also be the strategic path to stable, low energy costs over the next several years. With a 10 or 15-year agreement, you hedge your electricity consumption and avoid being affected by price fluctuations.

A PPA agreement is predictability and price stability in combination with sustainability. It adds value to the bottom line - both economically and environmentally.

VALUE OF THE PPA AGREEMENT

1. New renewable energy plants are built to cover your consumption.
2. You enter an attractive, long-term price agreement with a price below the forward contract.
3. Your company's energy consumption is future-proof in terms of both price and environment.

Produce your own green energy - we connect you directly!
